A highly motivated and adaptable recent B.Tech (Mechanical) graduate seeking an opportunity to kick-start my career as a Developer. Proficient in Java as well as web development, with a strong commitment to learning and applying emerging technologies. Eager to contribute to a dynamic team and drive innovation in IT industry.

## + Academic Projects

### Cafeteria Website

- Developed a responsive website using HTML, CSS, and JavaScript to ensure optimal performance across various devices and browsers.
- Implemented a user-friendly navigation system and intuitive interface to enhance the overall user experience.
- I worked as a frontend as well as database Developer.

### School Management System Using Python

- This is the software based on python language, which includes CRUD operations connected with database.
- It stores data of students and performs required operations as per need.
- This is my personal project done using python and various modules.

### Online Medicine Donation Software

- Develop an intuitive and secure online platform that facilitates the donation of unused or unexpired medicines to individuals in need.
- The software aims to streamline the donation process, ensure regulatory compliance, and maximize the impact of medicine donations in improving access to healthcare for underserved communities.
- This is my Last Year project, and I worked as database developer as well as some part of frontend.

### News App

- This is News App created using React.JS.
- It uses news API to get the data with category as well as it has some additional functionalities.
- It includes react router, hooks, and some other features.
